

# NEW CAMSHAFTS FOR C27, C32, C11, C13, C15, C18

In a diesel engine, the camshaft controls the timing of the opening and closing of the valves that allow fresh air to come in and exhaust to go out. On some later designs, it also controls the timing and operation of the fuel injectors and ultimately the performance output of the engine. A smooth working engine requires a precision camshaft.

CTP camshafts deliver the quality and reliability you come to expect from a trusted industry leader.
